

RELEASE NOTES

SERIAL INTERFACE MODULE – RMS1527-01-E

1. MODIFICATIONS

- 1.1 The Serial Interface Module now supports bit rates up to 38.4 kbps. This has been implemented by replacing the 300-bps option, essentially never used in practice, with 38.4 kbps.

Note that the current MCM firmware (RMS1551-01-J) has not been modified to reflect this change. Therefore, one must select 300 bps through the operator interface of the DAS8/DGR33A in order to get 38.4 kbps.

2. COMPATIBILITY

Firmware revision RMS1527-01-E of the RMS4272A SIM Module requires revision RMS1551-01-C (or later) of the RMS4183A MCM. See also 1.1.
