

## **DAS8/DGR33A Keyboard Simulator, v1.03**

### **Release Notes**

#### **1. Modifications/enhancements**

- 1.1. Scan and Error “LEDs” are larger and rendered in color.
- 1.2. Disk Utility and Configuration File menus have better prompts, and either echo the character typed in, or respond immediately to the character typed in. In some cases, an auxiliary window is opened and shows a prompt or an explanatory message. Cases that formerly required multi-key responses such as Y Return now respond to a single key press.
- 1.3. When pressed, the dialog buttons representing RCK function keys are drawn without the “selected” indication.
- 1.4. The RMS logo appears on the main dialog.
- 1.5. The icon that represents the executable file has been changed from a generic Microsoft icon to an RMS Instruments icon.
- 1.6. The F12 key, used as an alternative Enter key, now works correctly with items modified by the wheel.
- 1.7. The function buttons in the main KSIM dialog can now be “held down” as long as desired.
- 1.8. Vertical scrolling of multiple-line messages has been added.
- 1.9. Redirection of the disk directory to the KSIM display (Y /DD) now works properly.

#### **2. Known issues**

N/A

#### **3. Installation**

Copy KSIM.exe to a suitable directory and add a desktop short cut if desired.

#### **4. Compatibility: (Works with these firmware versions)**

Model No.	Firmware Rev. No.
RMS4183A MCM	RMS1551-01-J
